

Don't Run Out of Gas

Don't run out of gas. Serious Hazards, including fire or explosion, can result.

*If an appliance valve or a gas line is left open when the propane supply runs out, a leak could occur when the system is recharged with propane.

* Air and moisture could get into an empty or depleted storage tank, which can cause rust to build up inside the tank. Rust can decrease the concentration of the odor of propane, making it harder to smell.

* If your propane tank runs out of gas, any pilot lights on your appliance will go out. This can be extremely dangerous if not handled properly.

- **A leak test is required** – in Alabama, a propane supplier or licensed service provider must perform a leak check of your propane system before turning on the gas.
- **Set up regular delivery** - Establish a regular delivery schedule with your propane supplier
