

## PARTS UNDER TANK COVER

A – Storage Tank – holds your propane

B – Tank Cover – cover on top of your tank (if you have a underground tank, this will be the only visible part)

C – Tank shut off valve – stops the flow of propane to your home in case of a leak if closed

D – Regulator – controls the pressure of the propane coming out of the tank

E – Safety Relief Valve – will pop open automatically if the pressure in the tank gets too high and close when the pressure returns to normal

F – Tank Gauge – shows the percentage of propane on your tank
